Machine configuration

General purpose

Compute optimized

Memory optimized

GPUs

Machine types for common workloads, optimized for cost and flexibility

Try the new C3 machine series. There's no charge for C3 VMs during public preview.

Series

E2

CPU platform selection based on availability

Machine type

Choose a machine type with preset amounts of vCPUs and memory that suit most workloads. Or, you can create a custom machine for your workload's particular needs. [Learn more](#)

PRESET

CUSTOM

Creating a custom machine incurs additional costs

Cores

2

32

2 vCPU

☐ Shared core

Memory

16

8 GB

ADVANCED CONFIGURATIONS

Display device

Enable to use screen capturing and recording tools.

☐ Enable display device

Identity and API access

Service accounts

Service account

Compute Engine default service account

Requires the Service Account User role (roles/iam.serviceAccountUser) to be set for users who want to access VMs with this service account. [Learn more](#)

Access scopes

☒ Allow default access

☐ Allow full access to all Cloud APIs

☐ Set access for each API

Firewall

Add tags and firewall rules to allow specific network traffic from the Internet

☒ Allow HTTP traffic

☒ Allow HTTPS traffic

Advanced options

Networking, disks, security, management, sole-tenancy

Filter

Enter property name or value

<input type="checkbox"/>	Status	Name ↑	Zone	Connect
<input type="checkbox"/>	✓	csi-4160-finalproject-vm	us-central1-c	SSH ▾ ⋮

<input type="checkbox"/>	Status	Name ↑	Zone	Connect
<input type="checkbox"/>	✓	csi-4160-finalproject-vm	us-central1-c	SSH ▾ ⋮

```
#gcloud.sh is a tool to start/stop a VM under the 'My First Project' in
GCP
#args [start|stop]
#run by issuing,
#sh gcloud.sh start
gcloud compute instances $1 --zone "csi-4160finalproject-vm-us-central1-c"
"VM" --project "My First Project"
```

- Create and attach new HDD to your VM / gcloud (20%)

✓

Name your bucket

Pick a globally unique, permanent name. [Naming guidelines](#)

csi4160finalprojectmarogi

Tip: Don't include any sensitive information

Labels (optional)

Labels are key:value pairs that allow you to group related buckets together or with other Cloud Platform resources. [Learn more](#)

+ ADD LABEL

^ SHOW LESS

CONTINUE

✓

Choose where to store your data

This choice defines the geographic placement of your data and affects cost, performance, and availability. Cannot be changed later. [Learn more](#)

Location type

☐ Multi-region

Highest availability across largest area

☐ Dual-region

High availability and low latency across 2 regions

☒ Region

Lowest latency within a single region

us-central1 (Iowa) ▾

✓ Choose a storage class for your data

A storage class sets costs for storage, retrieval, and operations, with minimal differences in uptime. Choose if you want objects to be managed automatically or specify a default storage class based on how long you plan to store your data and your workload or use case. [Learn more](#)

- ☐ Autoclass
Automatically transitions each object to hotter or colder storage based on object-level activity, to optimize for cost and latency. Recommended if usage frequency may be unpredictable. Can be changed to a default class at any time. [Pricing details](#)
- ☒ Set a default class
Applies to all objects in your bucket unless you manually modify the class per object or set object lifecycle rules. Best when your usage is highly predictable. Can't be changed to Autoclass once the bucket is created.
- ☒ Standard
Best for short-term storage and frequently accessed data
- ☐ Nearline
Best for backups and data accessed less than once a month
- ☐ Coldline
Best for disaster recovery and data accessed less than once a quarter
- ☐ Archive
Best for long-term digital preservation of data accessed less than once a year

CONTINUE

• Choose how to control access to objects

Prevent public access

Restrict data from being publicly accessible via the internet. Will prevent this bucket from being used for web hosting. [Learn more](#)

☐ Enforce public access prevention on this bucket

Import data from Cloud Storage

PRIMARY INSTANCE

Overview

System insights

Query insights

Connections

Users

Databases

Backups

Replicas

Operations

Release Notes

Source

Choose a file to import from. Make sure you have read access first. [Learn more](#)

bucket-name/file-name *

csi4160finalprojectmarogi/data - Sheet1.csv

BROWSE

Browse for a Cloud Storage file or enter the path to one (bucket/folder/file)

File format

☐ SQL

A plain text file with a sequence of SQL commands, like the output of pg_dump

☒ CSV

If your Cloud Storage file is a CSV file, select CSV. The CSV file should be a plain text file with one line per row and comma-separated fields.

Destination

Choose the database and table in your instance for this file to import into. [Learn more](#)

Database *

csi4160-finalproject-sensehatdata-marogi

Table *

csi4160-finalproject-sensehatdata-marogi

Enter the name of an existing table in the database to house your CSV file

SHOW USER OPTIONS

When you import, a Cloud SQL service account will be granted read access to the selected file and bucket, which will be reflected in your permissions.
